Bangalore, India | +91 9993941535 | atharva.3vedi@gmail.com | [LinkedIn](#) | [Github](#)

PROFESSIONAL SUMMARY

AI/ML-focused software engineer with hands-on experience building LLM agents, RAG pipelines, and full-stack systems. Currently applying that background to Ericsson's 5G RAN program, combining backend engineering with AI-driven approaches to network data management. Comfortable ramping into new technical domains quickly and turning that into measurable engineering impact.

CORE SKILLS

Languages: Python, Java, C++, JavaScript, TypeScript, Dart

AI / LLM / Deep Learning: LangChain, Llama models, RAG, Prompt Engineering, Agent Orchestration, Pinecone, PyTorch, TensorFlow, Groq

Frameworks: Spring Boot, Django, ReactJS, Flutter, Angular

Cloud & Infrastructure: AWS, Firebase, Supabase, Docker, Git, REST API design, CI/CD-oriented workflows

Practices: Technical documentation & evangelism, secure coding, system design, Agile, cross-team partner collaboration

EXPERIENCE

Software Engineer | *GlobalLogic — Ericsson 5G RAN Program* Aug 2025 – Present

- **LLM-driven automation:** applied hands-on agentic AI and prompt-engineering experience to identify and prototype automation opportunities across RAN data pipelines, improving delivery efficiency by 40%.
- **Production backend engineering:** develop and maintain Java Spring Boot microservices and REST APIs on a large-scale, multi-vendor 5G data management program, following secure coding standards.
- **Cross-functional partnership:** work directly with distributed engineering and telecom domain teams to troubleshoot complex integration issues, translate requirements, and align on technical solutions — ramping from a non-telecom background to working fluency in RAN architecture within months, demonstrating fast domain onboarding.

AI/ML Development Intern | *AIonOS* Jul 2024 – Jan 2025

- **Agentic LLM systems:** designed and shipped a production-grade agentic AI system (LangChain, Llama-8B) automating end-to-end hotel booking workflows, including multi-step reasoning, tool/API orchestration and contextual memory — direct LLM development beyond API-only usage.
- **Model & prompt optimization:** iterated on prompt design and evaluation to improve model output quality and reliability, driving ~20% customer growth through better conversion and reduced booking friction.

Flutter Intern | *Click2Cloud* Dec 2022 – Jan 2023

- **Full-stack mobile delivery:** built cross-platform Flutter features, integrated REST APIs, and implemented GetX state management for production app workflows.

SELECTED PROJECTS

WanderBuddy — Production Travel Platform | Flutter, Firebase, Supabase, Stream, Agora, Mapbox | [Play Store](#)

- **Designed and shipped a production travel app end-to-end as sole engineer — architecture through Play Store launch — with real-time chat (Stream), voice/video calling (Agora), and live location sharing (Mapbox) on a cloud-native Firebase/Supabase backend**
- **Built an AI-powered itinerary planner and integrated visa-application workflows to streamline trip planning for user**

Tumor Growth Optimization — Python, Mesa, game theory, agent-based modeling - [Github](#)

- Developed an agent-based simulation combining evolutionary game theory and Stackelberg optimization, achieving ~25% reduction in tumor burden and ~28% reduction in treatment intensity; presented findings at ISCON 2025 — direct experience communicating technical/research work to expert audiences.

AlgoJudge.xyz — Django REST, ReactJS, Docker, AWS, EC2 | [Github](#)

- Built and deployed a full-stack online judge platform with scalable APIs for authentication, submissions and evaluation pipelines on AWS with Docker.

EDUCATION

Visvesvaraya National Institute of Technology (VNIT), Nagpur

Bachelor of Technology, Computer Science and Engineering • 2021 – 2025

CERTIFICATIONS & AWARDS

- ServiceNow Micro-Certifications: Flow Designer, IntegrationHub (2026)
- CodeCamp Hackathon Winner (2019)
- Gold Medalist, IMO & NSO
